

Region 17 E-Mail Filtering and Archiving Services

Google **E-Mail Filtering**, powered by Postini, provides highly effective inbound email security for school districts of all sizes. Built on a hosted service platform, these products block spam, phishing, malware and other intrusions before they reach your network, and provide content management and archiving to help you meet legal challenges.

The E-Mail Filtering includes:

- ✓ A convenient web console for administration.
- ✓ Includes multiple components that combine to deliver effective protection against email threats. Real-time threat identification; real-time anti-spam technology; and anti-virus protection.
- ✓ Ensure no delays, message lost or disruptions to email service.
- ✓ Guarantee email arrives even if your email servers go down with spooling.
- ✓ Allow end users to manage their own spam in an efficient manner.

Google **E-Mail Archiving**, powered by Postini, creates a centralized and searchable email repository for your school districts and quickly searches across the archive to collect email for legal discovery. Access to your archived messages is always at your fingertips.

The E-Mail Archiving includes:

- ✓ Manage email retention with a centralized, searchable archive so you can locate email quickly in the event of legal discovery.
- ✓ Store email in redundant and secure Google data centers, creating a reliable offsite backup.
- ✓ Search your archive using parameters such as date range, sender, recipient, subject and content.
- ✓ Place search results on litigation hold to preserve messages beyond their retention periods.
